Drawproof

AI & Fintech XRPL Hackathon · Lending Track · NYC 2026

Construction money should move only when the building does.

Investors fund a project. Each milestone's money waits in an XRP Ledger escrow until a licensed inspector's signed audit and an AI evidence review both pass.

Construction money moves on trust, not evidence

Investors release funds on a sponsor's word, and find out what happened after the money is gone.

$62.8M

raised from more than 800 investors through CrowdStreet. The sponsor diverted it, and its CEO was sentenced to 87 months in federal prison.

$208 million wiped out: Yieldstreet investors rack up more losses as firm rebrands to Willow Wealth

$208 million wiped out: Yieldstreet investors rack up more losses as firm rebrands to Willow Wealth ... Hampton Dumpty is the new corporate mascot...

Dec 5, 2025

$453.5B

in U.S. construction and development loans on bank balance sheets (FDIC via NAHB, Q2 2026)

5–14 days

from a builder's draw request to funding at today's lenders (Built Technologies)

~30%

of CRE-fraud reports to FinCEN involved misappropriated funds (FinCEN, 2011)

Every draw must pass its test suite

Like a software release: every check passes, the draw is paid. One fails, the money stays locked.

Automated review

AI and rule checks across every photo, invoice and audit

- ✓ Photo location matches the site
- ✓ Reused photos detected
- ✓ Invoices match the budget

Licensed inspector

Visits the site and signs the audit

- ✓ Assigned by Drawproof
- ✓ Signs with their own key
- ✓ Required for every release

XRP Ledger

Holds the money and keeps the record

- ✓ Vault pools investor RLUSD
- ✓ Escrow fixes the payee
- ✓ Results recorded on-chain

Drawproof's release service finishes an escrow only after every required check passes. The ledger fixes where the money can go and when it expires.

From investor deposit to verified draw

Native XRP Ledger features carry the money. No custom smart contract holds the funds.

1

Fund

Verified investors deposit RLUSD into the project's vault and receive shares.

Single Asset Vault · Credentials

2

Lock

The vault lends to a multisig project account, with one escrow per milestone.

Lending Protocol · Token Escrow

3

Review

The builder uploads evidence, the inspector signs the audit, and each result is recorded.

Signed attestations

4

Release or hold

- **Pass** paid to the builder
- **Fail** stays locked in escrow

EscrowFinish · CancelAfter

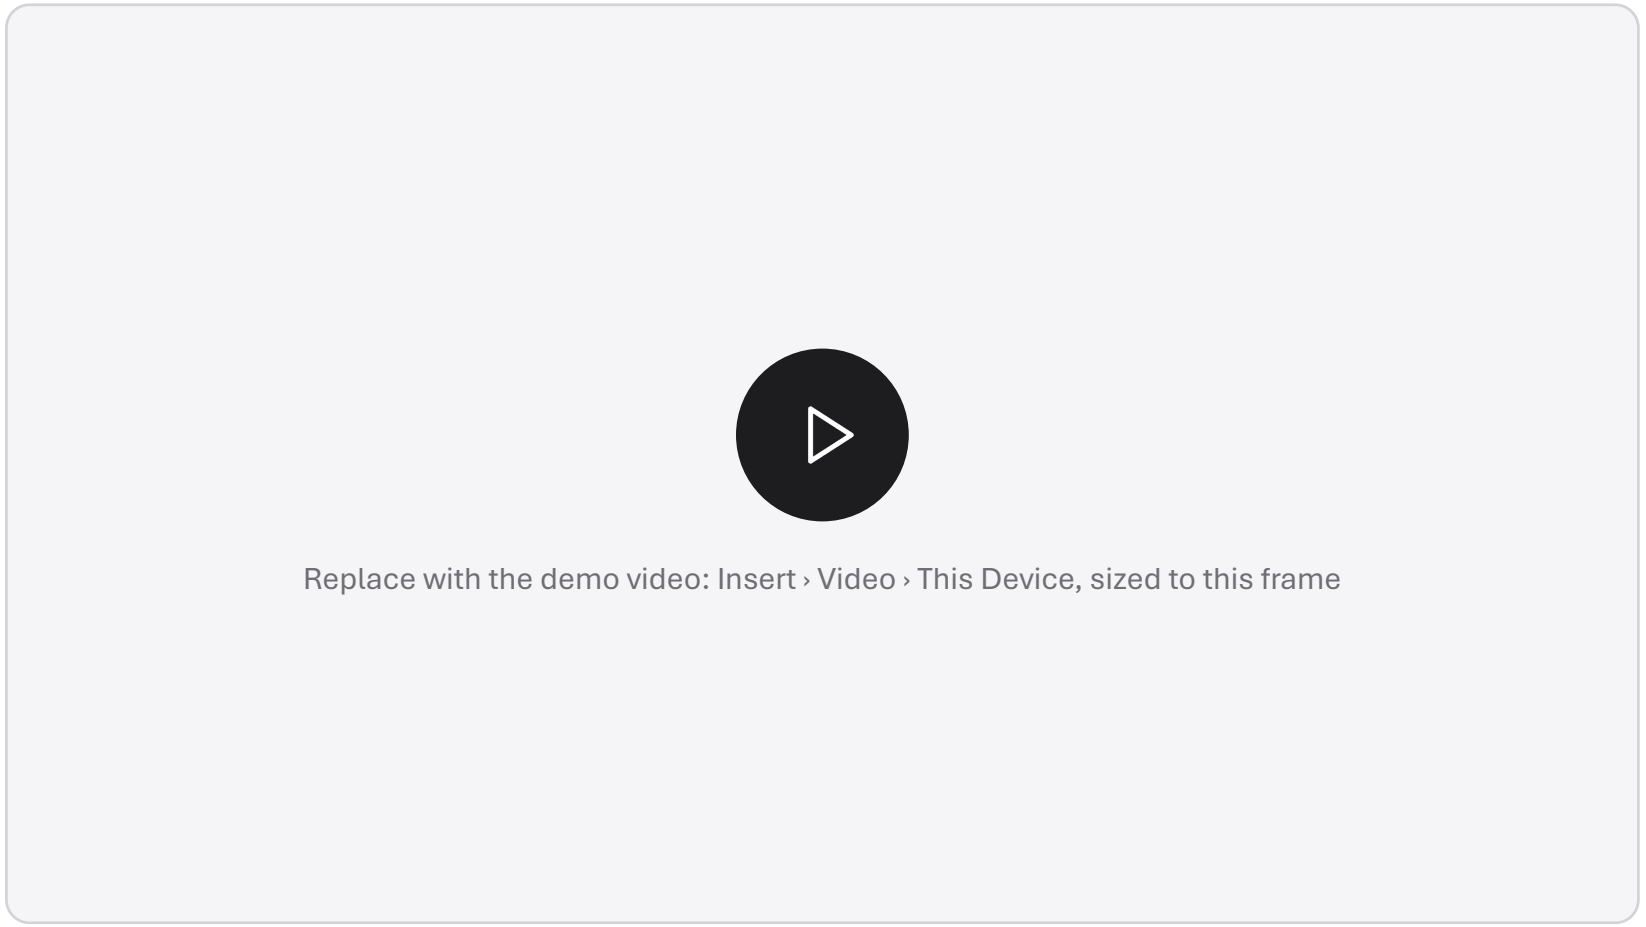

28

XRPL Devnet transactions run one project's full money path

Credentials, vault deposits, loan to a multisig project account, milestone escrows, signed audit record and release. Every transaction links to the public explorer.

Demo: one draw released, one held

Recorded · 1:40 · XRPL Devnet · Edited for time

What to watch

- **0:00** Maple St funded, draws locked
- **0:10** Inspector signs the site audit
- **0:30** Checks run with readable reasons
- **0:50** Milestone 1 passes and is paid
- **1:10** Milestone 2 reuses a photo and stays locked

Devnet prototype with a mock RLUSD token. The AI mode is labeled on screen. Not an offer to invest.

Thank you.
Questions?

What we built this weekend

Milestone escrows on the XRP Ledger
Each draw can only go to the builder or back to the project.

A test suite for every draw
Signed inspector audit plus AI evidence review gate each release.

Full money path on XRPL Devnet
28 transactions: vault, loan, escrows, audit record, release.

How Drawproof earns

Verification fee	per project, builder pays
Origination fee	1.5–2% at loan close
Management fee	~10% of loan interest
First-loss cover	we post 10%, lose first

$400K duplex, 9 months, 5 draws ≈ $12.5K platform revenue (~3%). Illustrative, not a forecast.
